

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

TRAVELING AND EXPENSE MANAGEMENT SYSTEM

The domain of the Project:
SALESFORCE

Team Mentors (and their designation):
Sriram Yarrabothula
Salesforce Developer

Team Members:

Ms. Annapoorna S J
Mr. Brijesh Kumar
Mr. Pankaj Yadav
Mr. Sudhanshu
Mr. Surya Vardhan

Period of the project

March 2026 to April 2026

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

Declaration

The project titled “**Traveling and Expense Management System**” has been mentored by **Sriram Yarrabothula Sir**, organised by SURE Trust, from **March 2026 to April 2026**, for the benefit of the educated unemployed rural youth for gaining hands-on experience in working on industry relevant projects that would take them closer to the prospective employer. I declare that to the best of my knowledge the members of the team mentioned below, have worked on it successfully and enhanced their practical knowledge in the domain.

Team Members:

Ms. Name -- Signature
Ms. Annapoorna S J -- Annapoorna S J
Mr. Brijesh Kumar -- Brijesh Kumar
Mr. Pankaj Yadav -- Pankaj Yadav
Mr. Sudhanshu -- Sudhanshu
Mr. Surya Vardhan – Surya Vardhan

Sriram Yarrabothula
Salesforce Developer — RAYON TECHNOLOGY SOLUTIONS PRIVATE LIMITED

Prof. Radhakumari
Executive Director & Founder
SURE Trust

6. Learning & Reflection
7. Future Scope & Conclusion

Executive Summary

- The **“Travel and Expense Management System”** project was developed with the objective of simplifying and digitizing the process of managing employee travel requests and expense reimbursements within organizations.
- In many companies, these processes are still handled manually or through multiple disconnected tools, which often leads to delays, errors, and lack of transparency.
- This project aims to provide a centralized and user-friendly platform that improves efficiency, accuracy, and accountability.
- The system was designed and implemented using modern technologies and a structured development approach.
- It enables employees to submit travel plans and expense claims online, while managers can review, approve, or reject them in real time.
- The platform also maintains organized records, generates reports, and ensures compliance with company policies.
- Key features such as automated calculations, document uploads, and status tracking help reduce manual effort and enhance the overall user experience.
- The results of the project demonstrate significant improvements over traditional methods by reducing processing time, minimizing human errors, and increasing transparency at all organizational levels.
- Users can easily track their requests, while administrators gain better control and visibility over expenses.
- Additionally, the system supports better decision-making through structured data and reporting features.
- Based on the outcomes, it is recommended that organizations adopt such digital solutions to streamline their travel and expense processes.
- Future enhancements may include mobile application integration, AI-based expense analysis, and integration with accounting systems for improved efficiency.
- Overall, this project demonstrates how technology can transform routine administrative tasks into a smooth, reliable, and efficient workflow.

Introduction

- In today's fast-paced organizational environment, managing employee travel and related expenses has become increasingly important. Many companies still rely on manual processes such as spreadsheets, emails, or paper-based submissions, which often lead to delays, errors, and lack of proper tracking. With the growing need for transparency, accuracy, and faster approvals, there is a clear demand for a streamlined and digital solution. The Travel and Expense Management System is designed to address these challenges by providing an integrated platform that simplifies the entire process from travel request to expense reimbursement.
- **Background and context of the project :** Organizations frequently deal with multiple travel requests and expense claims from employees across different departments. Traditional methods make it difficult to maintain consistency, enforce company policies, and track spending effectively. Employees often face delays in approvals and reimbursements, while managers struggle with verifying claims and maintaining proper records. This project was initiated to bridge this gap by introducing an automated system that centralizes all travel and expense-related activities, making the process smoother and more organized.
- **Problem statement or goals of the project :** The main problem addressed in this project is the inefficiency and lack of transparency in manual travel and expense management systems. The key goals of the project are:
 1. To develop a user-friendly platform for submitting and managing travel requests and expense claims.
 2. To automate approval workflows and reduce processing time.
 3. To minimize errors in calculations and documentation.
- **Scope and limitations of the project :** The scope of this project includes designing and developing a web-based system that allows employees to submit travel plans and expenses, and enables managers to review and approve them. It also includes features like document uploads, status tracking, and report generation. However, there are certain limitations:
 1. The system may not include integration with external accounting or payroll systems in its current version
 2. It is primarily designed for small to medium-sized organizations
 3. Advanced features like mobile application support or AI-based analytics are not fully implemented
- **Innovation component in the project :** The innovative aspect of this project lies in its approach to simplifying a traditionally complex and time-consuming process. Instead of relying on multiple disconnected tools, this system brings everything into one centralized platform. Features such as real-time tracking, automated calculations, and structured approval workflows make the system more efficient and reliable.

Project Objectives

- **Clearly defined objectives and goals of the project :**

1. The primary objective of the Travel and Expense Management System is to design and develop a reliable, user-friendly platform that simplifies the management of employee travel requests and expense reimbursements. The project aims to replace traditional manual methods with a structured digital solution that improves efficiency, accuracy, and transparency within the organization.
2. One of the key goals is to enable employees to easily submit travel plans and expense claims through an organized interface, reducing the need for paperwork and repetitive communication. At the same time, the system is designed to support managers by providing a smooth approval workflow, allowing them to review, approve, or reject requests quickly and efficiently. Another important objective is to automate calculations and validations, which helps in minimizing human errors and ensuring that all claims follow company policies.
3. The project also focuses on maintaining proper records of all transactions, making it easier to track expenses and generate reports when needed. By centralizing all data, the system aims to improve visibility and accountability across different levels of the organization. Additionally, enhancing the overall user experience—through features like status tracking, notifications, and document uploads—is a core objective of this project.

- **Expected outcomes and deliverables :**

1. By the end of the project, a fully functional web-based application is expected to be developed. This application will allow users to submit travel requests and expense claims, while providing administrators and managers with tools to monitor and manage these requests effectively. The system will include features such as user authentication, automated workflows, expense calculation, and report generation.
2. The key deliverables of the project include the complete source code of the application, a working system interface, and proper documentation covering system design, functionality, and usage guidelines. The project will also demonstrate improved efficiency in processing requests, reduced errors, and better transparency compared to traditional methods. Overall, the expected outcome is a practical and scalable solution that can be further enhanced and adapted to meet real-world organizational needs

Methodology and Results

- **Methods/Technology used :**

1. The project was developed using a structured and practical approach, focusing on building a full-stack web application. A modular development methodology was followed, where the system was divided into frontend, backend, and integration layers. The frontend was designed to provide an interactive and user-friendly interface, while the backend handled business logic, validations, and data processing.
2. Modern web technologies were used to ensure scalability and performance. The system follows a client-server architecture, where user requests are sent from the interface to the server, processed, and then returned with appropriate responses. RESTful APIs were implemented to manage communication between the frontend and backend efficiently. The development process also included testing at each stage to ensure reliability and smooth functioning.

- **Tools/Software used**

The project was developed using the following tools and technologies:

1. Salesforce Lightning Platform
2. Lightning Web Components (LWC)
3. Apex Programming Language
4. Salesforce Flow Builder
5. SOQL (Salesforce Object Query Language)
6. Salesforce Reports & Dashboards
7. These tools enabled the development of a scalable, secure, and efficient system.

- **Data collection approach (if applicable)**

1. The system collects data directly from users through structured forms available in the application. Employees enter travel details such as destination, dates, and purpose, and record expenses with relevant information like amount, type, and description.
2. The entered data is validated using predefined rules such as ensuring positive expense amounts and valid travel dates. All data is stored in Salesforce objects, ensuring centralized and organized data management.

- **Project Architecture (Clearly describe the architecture)**

The system follows a three-layer architecture:

1. **Presentation Layer:** Developed using Lightning Web Components to provide an interactive user interface such as dashboards and expense entry forms.
2. **Application Layer:** Implemented using Apex classes and triggers to handle business logic, validations, and workflows.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

3. **Data Layer:** Consists of Salesforce objects such as Travel Request, Trip, Expense, Expense Report, and Reimbursement, which store all application data.
4. Additionally, Salesforce Flows are used to automate processes like approvals, notifications, and status updates, making the system efficient and reliable.

Salesforce Data Model (Objects and Relationships)

The above figure represents the data model of the Travel and Expense Management System. It shows the relationships between different Salesforce objects such as Travel_Request__c, Trip__c, Expense__c, ExpenseReport, Reimbursement__c, and Employee_Expense_Summary. The User object is centrally connected, indicating that all operations are performed by system users. These objects are related using lookup and master-detail relationships, ensuring proper data organization and integrity. This structure acts as the database (ER Diagram) of the system, enabling efficient storage and retrieval of travel and expense data.

Automation using Salesforce Flows:

1. Auto Close Completed Travel Requests Flow

This scheduled flow runs daily to automatically update the status of completed travel requests. It identifies records that meet specific conditions and updates their status to closed. This automation reduces manual effort and ensures that completed requests are

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

properly finalized in the system

2. Travel Request Creation Flow

This screen flow allows users to create a new travel request. It collects input data through a user interface, saves the record in the system, and displays a success message. This flow simplifies the process of travel request creation and ensures structured data entry.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

3. Daily Pending Approval Reminder Flow

This scheduled flow runs daily to identify pending travel requests. It retrieves all records that are awaiting approval and loops through them. For each pending request, the system sends an automated reminder email to the respective approver. This helps in reducing delays and ensures timely approvals.

4. Reimbursement Status Update Flow

This record-triggered flow is executed when a reimbursement record is updated. It automatically updates the status of the associated expense report. This ensures synchronization between reimbursement and expense data, maintaining consistency and reducing manual intervention in financial tracking.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

5. **Expense Report Submission Flow**

This screen flow automates the process of submitting an expense report. It begins with a user input screen where expense details are collected. The system then performs data mapping and retrieves related expense records. A decision element checks whether the report is eligible for submission. If validation fails, an error screen is displayed; otherwise, a confirmation message is shown and the expense report status is updated accordingly. This flow ensures proper validation and reduces manual errors during submission.

6. **Travel Request Submission Flow**

This flow automates the process of updating the status of travel requests upon submission.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

7. **Expense Record-Triggered Flow**

This flow is triggered when an expense record is created or updated. It automatically updates related records, ensuring data consistency.

- **User Roles and Security Management**

The role hierarchy defines the access levels of different users in the system. It consists of three main roles: Admin, Manager, and Employee. Admins have full control over the system, managers are responsible for approving travel and expense requests, and employees can submit requests. This hierarchy ensures proper access control, data security, and workflow management.

- **Final project working screenshots along with supporting explanation**

The system provides a complete workflow for managing travel and expenses:

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

1. **Dashboard**

This dashboard provides visual insights into total expenses, pending travel requests, and total trips. It uses Salesforce reports to present data in graphical form, supporting better decision-making.

2. **Reports**

a. **Travel Requests by Status**

This report categorizes travel requests based on their status such as submitted, approved, or rejected. It helps managers track request progress.

Report: Travel Request Report
Travel Requests by Status

Total Records: 3

☐ Status ↑	Request Name	Employee: Full Name	Start Date	End Date	Destination
☐ Submitted (3)	Hotel Stay	Pankaj Yadav G1 Salesforce Pankaj Yadav G1 Salesforce	24/04/2026	30/04/2026	-
	a00NS000036tGnB	SURYA VARDHAN	-	-	-
	a00NS000036uJJE	SURYA VARDHAN	-	-	-
Subtotal					
Total (3)					

b. **Monthly Expense Report**

This report summarizes expenses based on month and type, providing insights into spending patterns.

Report: Expense Report
Monthly Expense Report

Total Records: 3 Total Amount: ₹17,000.000

☐ Expense Date ↑	Expense Name	Amount	Expense Type	Status
☐ April 2026 (3)	Hotel Stay	₹5,000.000	Accommodation	Approved
	Shopping	₹10,000.000	Accommodation	Approved
	holiday	₹2,000.000	Travel	Submitted
Subtotal		₹17,000.000		
Total (3)		₹17,000.000		

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

c. **Expenses by Employee**

This report shows total expenses incurred by each employee, helping organizations monitor individual spending.

Report: Expense Report Expenses by Employee					
Total Records	Total Amount				
3	₹17,000.000				
☐ Created By: Full Name ↑	Expense Name	Amount	Status	Expense Date	Expense Type
☐ SURYA VARDHAN (3)	Hotel Stay	₹5,000.000	Approved	25/04/2026	Accommodation
	Shopping	₹10,000.000	Approved	28/04/2026	Accommodation
	holiday	₹2,000.000	Submitted	27/04/2026	Travel
Subtotal		₹17,000.000			
Total (3)		₹17,000.000			

d. **Reimbursement Status**

This report tracks reimbursement details including payment status and amount, ensuring financial transparency.

Report: Reimbursement Report Reimbursement Status				
Total Records	Total Amount			
1	₹5,000			
☐ Status ↑	Reimbursement Name	Amount	Payment Date	Expense Report: Report Name
☐ Paid (1)	Hotel Stay	₹5,000	01/05/2026	d
Subtotal		₹5,000		
Total (1)		₹5,000		

3. **LWC Components**

a. **Travel Dashboard**

The Travel Dashboard provides a quick overview of key metrics such as total trips, pending approvals, and total expenses. It helps users and managers monitor system activity in real time and make informed decisions efficiently.

Travel Dashboard		
Total Trips	Pending Approvals	Total Expenses
2	1	₹ 22000

b. **Expense Reports Component**

This component displays all expense reports with details such as employee name, total amount, and status. Users can filter reports based on status and submit draft reports for approval. The interface improves visibility and simplifies expense tracking.

Expense Reports				
Filter by Status				
All				
☐ Report Name	Employee	Total Amount	Status	
☐ Hotel charges	Pankaj Yadav G1 Salesf...	₹7,000.00	Approved	<button>Submit</button>
☐ y	SURYA VARDHAN	₹0.00	Draft	<button>Submit</button>
☐ c	Chatter Expert	₹10,000.00	Draft	<button>Submit</button>
☐ d	SURYA VARDHAN	₹5,000.00	Submitted	<button>Submit</button>

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

c. **Add Expense Form Component**

The Add Expense form allows users to enter expense details such as expense name, trip, type, amount, date, and description. It ensures structured data entry and supports validation to reduce errors before saving the record.

The screenshot shows the 'Add Expense' form. It has a title bar with a plus icon and the text 'Add Expense'. Below the title bar are several input fields: 'Expense Name' (text input), 'Trip' (search input with a magnifying glass icon), 'Expense Type' (dropdown menu with '--None--' selected), 'Amount' (text input), 'Expense Date' (date picker with a calendar icon), 'Description' (text input), 'Status' (dropdown menu with '--None--' selected), and '* Expense Report' (search input with a magnifying glass icon). At the bottom is a blue button labeled 'Save Expense'.

4. **RECORD CREATION SCREENS**

a. **Travel Request Record Type**

This screen allows users to select the type of travel request such as Domestic or International, enabling structured data entry.

The screenshot shows the 'New Travel Request' screen. It has a title bar with the text 'New Travel Request'. Below the title bar is a section titled 'Select a record type' with two radio button options: 'Domestic Travel' (selected) and 'International Travel'. At the bottom right are two buttons: 'Cancel' and 'Next'.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

b. Travel Request Form

This form collects travel details such as employee, travel type, dates, destination, and purpose. It is used to initiate the travel approval process.

c. Expense Record Type

Users can select expense type such as official or personal, ensuring proper categorization of expenses.

d. Expense Form

This form is used to record individual expenses related to a trip, ensuring accurate expense tracking.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

e. Reimbursement Form

This form allows users to request reimbursement for approved expenses, including payment details and status.

The screenshot shows the 'New Reimbursement' form. The 'Information' section contains the following fields: 'Reimbursement Name' (text input), 'Expense Report' (search input), 'Amount' (text input), 'Payment Date' (calendar icon), 'Status' (dropdown menu), and 'Owner' (SURYA VARDHAN). The form has 'Cancel', 'Save & New', and 'Save' buttons at the bottom.

f. Expense Report Creation

This screen is used to create an expense report that groups multiple expenses for submission and approval.

The screenshot shows the 'New Expense Report' form. The 'Information' section contains the following fields: 'Report Name' (text input), 'Employee' (search input), 'Status' (dropdown menu), and 'Owner' (SURYA VARDHAN). The form has 'Cancel', 'Save & New', and 'Save' buttons at the bottom.

g. Trip Creation

This form is used to create trip records linked to travel requests, including booking details and travel costs.

The screenshot shows the 'New Trip' form. The 'Information' section contains the following fields: 'Trip Name' (text input), 'Travel Request' (search input), 'Booking Date' (calendar icon), 'Mode of Travel' (dropdown menu), 'Ticket Cost' (text input), 'Hotel Name' (text input), and 'Hotel Cost' (text input). The form has 'Cancel', 'Save & New', and 'Save' buttons at the bottom.

Social / Industry relevance of the project

- The Travel and Expense Management System has significant relevance in both social and industrial contexts.
- In the corporate world, many organizations still depend on manual processes to manage employee travel and expenses, which leads to inefficiencies, delays, and errors. This system provides a **digital and automated solution** that improves accuracy, reduces paperwork, and speeds up approval and reimbursement processes. It enhances transparency by allowing employees and managers to track requests in real time, thereby improving accountability within the organization.
- From an industry perspective, such systems are widely used in sectors like IT, consulting, and corporate enterprises, making this project highly relevant to real-world applications. The use of the **Salesforce platform** also aligns with current industry demands, as Salesforce skills are highly valued in the job market.
- Socially, the system contributes to **digital transformation** by reducing dependency on paper-based processes and promoting efficient resource management. It also encourages better organizational practices, saving time and effort for both employees and management.
- Overall, this project demonstrates how technology can be used to improve organizational efficiency while supporting modern, sustainable, and transparent work practices.

Learning and Reflection

- **Document every team member's new learnings (in terms of technology, management, etc). :**

Working on this project using Salesforce gave each team member a completely new perspective on how enterprise-level applications are built without heavy traditional coding.

1. **Salesforce Platform Understanding:** All team members gained a strong foundation in the Salesforce ecosystem, including how cloud-based CRM platforms can be customized to build complete applications like a Travel and Expense Management System.
2. **Object & Data Modeling:** We learned how to create custom objects (such as Travel Requests and Expense Records), define fields, and establish relationships between them. This helped us understand how real-world data is structured and managed efficiently within Salesforce.
3. **Automation Tools (Flows & Process Builder):** One of the most valuable learnings was working with Salesforce Flow. We used it to automate approval processes, notifications, and validations, which reduced manual effort and improved system efficiency.
4. **User Roles & Security:** The team understood how to implement role-based access using profiles, permission sets, and sharing rules. This ensured that employees, managers, and admins had appropriate access control.
5. **Lightning App Builder & UI Design:** We explored how to design user-friendly interfaces using Lightning components and App Builder, making the system easy to navigate even for non-technical users.
6. **Reports & Dashboards:** Another important learning was creating reports and dashboards to track expenses, approvals, and overall system performance. This gave us insight into how organizations make data-driven decisions.

- **Document every team member's experience. (overall experience)**

1. Overall, working on this project in Salesforce was a unique and rewarding experience. Initially, it was challenging to understand the platform because it is quite different from traditional programming environments. Concepts like objects, flows, and declarative development were new to most of us.
2. There were moments where we faced difficulties, especially while designing workflows and debugging automation processes. But through teamwork, discussions, and continuous practice, we were able to overcome these challenges.
3. This project not only improved our technical knowledge of Salesforce but also enhanced our problem-solving skills and teamwork. It gave us real-world exposure to how companies manage internal operations using cloud platforms.
4. However, as we progressed, we realized how powerful and efficient Salesforce is for building business applications. Tasks that would normally require extensive coding could be implemented using simple configurations and automation tools.
5. In the end, this experience made us more confident in working with enterprise tools and prepared us for future opportunities in both technical and functional roles within the Salesforce ecosystem.

Conclusion and Future Scope

- **Recap objectives and achievements :**

1. The main objective of this project was to design and develop a simplified, efficient, and transparent system for managing travel requests and expense reimbursements using the Salesforce platform. The goal was to replace manual and time-consuming processes with a centralized digital solution that improves accuracy, reduces delays, and enhances user experience.
2. By the end of the project, these objectives were successfully achieved. The system allows employees to submit travel and expense details بسهولة, while managers can review and approve them through a structured workflow. Automation features such as Salesforce Flows helped streamline approvals and reduce manual intervention. Proper data management was ensured through custom objects, and role-based access control maintained security and privacy.
3. Additionally, the project demonstrated improved efficiency, better tracking of requests, and enhanced transparency across all users. Reports and dashboards provided clear insights into expenses, helping in better monitoring and decision-making. Overall, the system proved to be a practical and scalable solution for organizational needs.

- **Future scope of this project :**

1. Although the current system is functional and effective, there is significant scope for further enhancement.
2. In the future, the project can be expanded by integrating it with external accounting or payroll systems to enable automatic reimbursement processing. A mobile-friendly version or dedicated mobile app can also be developed to allow users to submit and track requests on the go.
3. Advanced features such as AI-based expense analysis can be introduced to detect unusual spending patterns or suggest cost-saving measures. Integration with real-time travel services (like ticket booking or hotel reservations) could further enhance usability.
4. Additionally, implementing chatbot support within Salesforce can help users quickly resolve queries related to their requests. The reporting system can also be enhanced with more advanced analytics and forecasting capabilities.
5. Overall, this project lays a strong foundation, and with continuous improvements, it has the potential to evolve into a fully intelligent and enterprise-ready travel and expense management solution.
